AI-Assisted Software Engineer | MCP, Code Retrieval/RAG, Agents and Full-Stack Prototyping

France · Full remote

sebastien.grans@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Target role: AI Vibe Coding Engineer — Gruve

Profile

Software engineer with 10+ years of experience building and operating web applications, APIs and business-critical backend services. Since 2024, I have focused my independent engineering work on AI-assisted product delivery: coding agents, MCP servers, semantic code retrieval, prompt-driven workflows, rapid prototyping and human-controlled automation.

I combine hands-on AI developer tooling with a strong software-engineering foundation. My recent work includes an MCP-accessible retrieval architecture for coding agents, semantic search powered by local embeddings, structural code graphs, OpenAI Responses integrations, multi-agent orchestration, and a demonstrable Laravel/Vue/TypeScript product supported by Python/FastAPI services. I work effectively in full-remote environments through written communication, explicit specifications, incremental delivery and strong ownership.

Core Skills

AI engineering and developer tooling: Codex · ChatGPT · OpenAI Responses API · AI coding agents · MCP servers · code retrieval/RAG · embeddings · semantic search · CocolIndex Code · Codebase Memory MCP · prompt engineering · agent orchestration · Paperclip · controlled AI workflows · human-in-the-loop validation · LangChain/LangGraph exposure

Application development: TypeScript · Vue 3 · JavaScript · PHP 8 · Laravel · Symfony · Python/FastAPI · React exposure · REST APIs · OpenAPI · API Platform · microservices · async jobs/workers · WebSockets

Data and infrastructure: PostgreSQL · MySQL · Redis · Neo4j experimentation · Docker/Compose · Kubernetes/k3s · AWS/CloudWatch · Git/GitHub/GitLab · CI/CD · Grafana/Loki · ELK

Engineering quality: automated tests · PHPUnit · Playwright · API/integration testing · code review · static analysis · observability · incident response · technical documentation · architecture and data-flow analysis

Role Alignment

- Rapidly turns product ideas and explicit requirements into working full-stack prototypes with AI coding agents and modern web frameworks.
- Designs and integrates MCP tooling, REST APIs, LLM workflows and developer-productivity automation.
- Applies practical retrieval/RAG patterns through embeddings, semantic code search and context injection for coding agents.
- Combines TypeScript, Vue, Python/FastAPI and mature backend engineering to build testable demonstrations and internal tools.
- Experiments quickly while preserving Git history, automated validation, observability, security boundaries and human review.

Selected AI and Product Engineering Experience

Sonomundi — Independent AI and Product Engineering

2024–Present · Full remote

- Built and continuously improved a full-stack event and music product using Laravel, Vue 3, TypeScript, REST/OpenAPI, Redis, Docker and Python/FastAPI services; used it as a working environment for rapid product experimentation and AI-assisted engineering.
- Integrated and industrialized a code-retrieval architecture for AI agents: CocolIndex semantic discovery using local embeddings, exposed through MCP, followed by structural validation with Codebase Memory MCP for symbols, callers, data flows and impact analysis.
- Operated persistent, checkout-scoped semantic and structural indexes for separate control, runtime and goal workspaces, with Docker isolation, offline embedding inference, read-only source mounts and secret/runtime exclusions.
- Connected Codex and Paperclip agents to MCP tooling so they could retrieve relevant code context, analyze changes, implement bounded tasks and return evidence for human review.
- Implemented product-facing LLM workflows through the OpenAI Responses API, including structured extraction, image/flyer analysis, content classification and contribution review, with normalized outputs and safe fallbacks.
- Designed agentic delivery workflows around Markdown specifications, prompts, worktrees, branches, Docker-based validation, LLM reporting and manual integration; no autonomous merge or bypass of human review.
- Used LangChain/LangGraph in local readiness and audit workflows, while keeping executable tests and repository evidence as the source of truth.
- Maintained a demonstrable recruiter environment with documented architecture, OpenAPI contracts, backend/UI tests and observability evidence.

Relevant stack: Codex, ChatGPT/OpenAI Responses, MCP, CocolIndex Code, embeddings, semantic retrieval, Codebase Memory, Paperclip, LangChain/LangGraph, TypeScript, Vue 3, Laravel, Python/FastAPI, REST/OpenAPI, Docker, Git, CI/CD

Professional Experience

Evina — Senior Back-end Developer

June 2022–June 2024 · Full remote

- Developed and operated high-traffic backend services for cybersecurity and mobile-payment use cases using PHP/Laravel, MySQL, Redis, WebSockets and asynchronous processing.
- Improved database and service performance through indexing, progressive MySQL-to-Redis migration, monitoring and controlled rollouts with rollback capability.
- Integrated Auth0 and Laravel Sanctum authentication across multiple applications and contributed to React-based product improvements.
- Participated in production incident response and on-call rotations; analyzed logs, latency, HTTP errors, resource use and deployment stability through ELK and Grafana.
- Reviewed code across product teams, contributed to architecture decisions, mentored Git practices and delivered technical workshops in English.

Sapiendo — Back-end Developer / DevOps

February 2021–May 2022 · Full remote

- Designed and delivered a JWT-secured Symfony/API Platform service for asynchronous PDF-to-XML processing, with upload/download APIs, callbacks, tests and documentation.
- Built Laravel business features and integrations; collaborated directly with the CTO, Product Owner and an external vendor.
- Worked with Docker, GitLab/GitHub CI/CD, Postman/Newman, AWS CloudWatch, Sentry and multi-environment delivery.

Groupe Blachere — Software Development Engineer

December 2020–January 2021 · Hybrid

Education and Languages

- DEUST Webmaster and Internet Professions — University of Limoges, 2012
- French: native
- English: professional working proficiency; regular technical collaboration, documentation and workshops in English

- Developed a Symfony application around a constraint-based placement and optimization algorithm using object-oriented design and DDD.
- Added automated tests, PHPStan analysis and a 2D visualization of placement results.

SensioLabs — Web Developer

April 2018–September 2018 · Full remote

- Built Symfony/API Platform features and integrations with Microsoft Graph, Yammer and Bing through Guzzle.
- Worked with RabbitMQ, Redis, JWT, Behat, PHPUnit, Docker and Travis CI.

Norsys — Web Developer / Symfony Technical Referent

September 2013–March 2018

- Delivered PHP/Symfony applications for Decathlon, Fiducial, Technal and Franprix; acted as Symfony technical referent, supported developers and reviewed architecture and implementation choices.
