

Sébastien Grans

Senior Back-End Developer | PHP · Laravel · REST APIs

France · Available for fully remote work across Europe

sebastien.grans@gmail.com · [LinkedIn](#) · [GitHub](#) · [Full CV](#)

Target role: **Senior Back-End Developer** — **Laravel, API, GDS**

Profile

Senior Laravel/PHP engineer with **8+ years of professional experience** delivering reliable APIs and business-critical back-end systems. I bring years of hands-on Laravel delivery backed by deep Symfony expertise—two ecosystems built on the same modern PHP foundations. I design for performance, clean architecture and long-term maintainability, and I stay accountable through deployment and production.

I take ownership from requirement clarification and technical design through implementation, review, deployment and incident resolution. At Evina, I worked remotely in an international cybersecurity and mobile-payment environment, including technical collaboration and workshops in English. I am now seeking a fully English-speaking, international engineering role.

Core Skills

Back end: 8+ years PHP · Laravel · Symfony · API Platform · REST APIs · OpenAPI · Eloquent/Doctrine · Auth0 · Laravel Sanctum · JWT · workers and queues · WebSockets

Data and architecture: MySQL/MariaDB · PostgreSQL · Redis · object-oriented design · SOLID principles · design patterns · DDD · database modelling · indexing and query optimisation

Quality and delivery: PHPUnit · Behat · PHPStan/Larastan · unit, integration and functional testing · code review · refactoring · technical documentation · Git · GitHub/GitLab CI/CD

Production: Docker/Compose · AWS CloudWatch · Sentry · ELK · Grafana · monitoring · incident response · controlled rollouts and rollback

AI-assisted engineering: Claude · Codex · OpenAI · MCP · controlled workflows for analysis, implementation, testing and documentation, with human review and technical validation

Professional Experience

Evina — Senior Back-End Developer

June 2022–June 2024 · Full remote · Cybersecurity and mobile payments

- Developed and maintained critical PHP/Laravel services supporting fraud prevention, mobile-payment flows and real-time processing.
- Improved performance through MySQL indexing and the progressive migration of tracking and scoring data to Redis.
- Integrated Auth0 and Laravel Sanctum across several applications to standardise authentication and user management.
- Investigated production incidents through ELK and Grafana, working across APIs, workers, Redis and MySQL.
- Contributed to architecture decisions, daily code reviews and developer support; delivered technical workshops in English.

Sapiendo — Back-End Developer / DevOps

February 2021–May 2022 · Full remote · Retirement services and business automation

- Designed a JWT-secured Symfony/API Platform REST service that transformed pension-statement PDFs into structured XML data.
- Implemented upload, processing, callback and download workflows, together with automated API tests and documentation.
- Built Laravel business features and integrations in direct collaboration with the CTO, Product Owner and an external provider.
- Supported reliable multi-environment delivery with Docker, GitHub/GitLab CI/CD, Postman/Newman, AWS CloudWatch and Sentry.

Earlier Experience

- **Groupe Blachère — Software Development Engineer (Dec. 2020–Jan. 2021):** Symfony application for a constraint-based placement algorithm; object-oriented/DDD design, automated tests and PHPStan.
- **SensioLabs — Back-End Developer (2018):** Symfony/API Platform integrations with Microsoft Graph, Yammer and Bing; RabbitMQ, Redis, JWT, Behat, PHPUnit, Docker and CI.
- **Norsys — Back-End Developer / Symfony Technical Referent (2013–2018):** PHP/Symfony projects for Decathlon, Fiducial, Technal and Franprix; technical guidance and code reviews.

Independent Product Engineering

Sonomundi — Laravel/Vue Event Platform

July 2024–Present · Side project, now largely automated

- Building a web platform from scratch with Laravel, Vue 3, TypeScript, REST/OpenAPI, MySQL, Redis, asynchronous jobs, automated tests and Docker.
- Applying AI-assisted workflows to code analysis, implementation, testing and documentation while retaining human review and executable validation.
- Implementing product-facing AI features for structured extraction, image analysis and content classification with safe fallbacks.
