

Sébastien Grans

Senior Software Engineer — backend products, APIs, automation and applied AI

France · Full remote · occasional travel possible

sebastien.grans@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Target role: [Software Engineer — The Flex / Base360.ai](#)

Profile

Senior product-oriented software engineer with 7 cumulative years of professional backend experience, from requirement clarification and data modeling to APIs, tests, deployment, monitoring and production support. My core stack is PHP/Laravel/Symfony, with professional React exposure and recent TypeScript, Python/FastAPI, OpenAI API and automation work through Sonomundi.

At Evina, I owned changes on high-traffic cybersecurity and payment services, including MySQL-to-Redis migration, secure authentication, async workers, observability and incident response. At Sapiendo, I delivered a complete API and third-party parsing workflow, coordinating business, vendor and production constraints. This background maps well to The Flex's real-time operational integrations and end-to-end ownership.

Sonomundi demonstrates current builder momentum: a Laravel/Vue product, Python/FastAPI satellite services, OpenAPI contracts, OpenAI-powered asynchronous features, Docker/Make validation and controlled agentic workflows. I work effectively in fast-moving remote environments through autonomy, concise written communication and measurable technical evidence.

Role Alignment

- Production-grade backend systems, REST APIs, distributed workflows, relational data and third-party integrations.
- Python/FastAPI services, React/TypeScript exposure, PostgreSQL, Docker, CI/CD and OpenAI API work demonstrated in Sonomundi.
- Strong ownership from idea and architecture through implementation, deployment, monitoring and iteration.
- Automation mindset applied to async jobs, document processing, operational workflows and controlled AI agents.
- Product judgment, independent problem solving and experience with business-critical services.

Experience

Evina - Senior Back-end Developer

June 2022 - June 2024

FinTech, cybersecurity and mobile payments - [evina.com](#) · Full remote

- Back-end contribution on critical, high-traffic, high-volume services related to FinTech, cybersecurity, mobile payment flows, real-time/WebSockets and business-critical/SaaS products, in a team of about 6 developers and 5 infrastructure profiles.
- Delivered scalability solutions, database performance improvements and query optimization: MySQL indexing, progressive MySQL-to-Redis migration, pre/during/post-deployment monitoring, fast rollback capability and reporting.
- Accounted for API versioning, API backward compatibility, service continuity and no data loss.
- Security testing: vulnerability checks on dependencies, produced code and Docker images.
- Core code cleanup/refactoring and PHP n+1 upgrade preparation with Rector, static analysis, automated tests and code review.
- Secure Authentication: Auth0 and Laravel Sanctum back-end/front integration across 3 Laravel applications + Dundas to standardize login procedures across the application portfolio and set up SSO/single sign-on style multi-app login.
- Clean Architecture, Design Patterns, schema design/UML reading, technical guidance, decision making, technical arbitration/trade-offs, collective review and business requirements clarification with technical leads.
- Created CLI commands and `async/queues/workers` processing.
- Initial production releases through Jenkins on the relevant application scope, then transition to Kubernetes/GitHub with the infrastructure team.
- Worked in a multi-region environment with availability, monitoring, rollback and service-continuity requirements.
- React contributions to targeted improvements on the public Evina Eyewitness product.
- Set up and tracked technical indicators through ELK/Grafana/logs: HTTP status codes, 4xx/5xx error rates, response times, MySQL load, incidents and deployment stability.
- Production on-call for one year, 24/7 about one month out of three: memory incidents, traffic overloads and bug analysis, application observability and debugging via ELK (Elasticsearch, Logstash, Kibana) and Grafana/logs, infrastructure escalation, reporting and continuous reliability improvement.
- Secured delivery through daily code reviews across 4 to 5 cross-product developers, Git workflow mentoring (rebase, squash, cherry-pick, commit messages), YAGNI/SOLID/OOP/KISS/PSR feedback, architecture discussions/design reviews, Notion documentation, refactoring/technical debt handling, exchanges with commercial stakeholders and English-speaking developers, and English workshops on OOP, unit tests/TDD and Xdebug.

Stack: PHP, Laravel, Laravel Sanctum, Auth0, Redis, MySQL, MySQL indexing, Docker, CLI, `async/queues/workers`, WebSockets/real-time, ELK (Elasticsearch, Logstash, Kibana), Grafana/logs, JavaScript, React, Jenkins, GitLab CI, GitHub, Kubernetes, multi-region environment

Sapiendo - Back-end Developer / DevOps

February 2021 - May 2022

Retirement services and business automation - [sapiendo-retraite.fr](#) · Full remote

- Designed and delivered Super Boris, a JWT-secured Symfony 5.4 LTS/API Platform API converting RIS PDF documents to XML: PDF upload, parser triggering, XML callback and result download.
- API Platform: custom upload/download operations, test catalogs, triggerable route collections, Postman, documentation and JWT/PDF/XML e2e scenario.
- Vendor coordination, creation of the microservice and its client, unit tests, integration testing, deployment, architecture documentation and sequence diagrams.
- Laravel business development, Design Patterns on business features, implementation of retirement algorithms and regular exchanges with the Product Owner.
- GitHub/GitLab CI/CD and Docker on the PDF/XML flow; multi-env variables, Postman/Newman checks, CloudWatch/Sentry, Composer/npm/npv dependency management, tests and upgrades.
- Strong autonomy with the CTO, Laravel and Git workflow mentoring for an internal developer (rebase, squash, cherry-pick, commit messages), and daily review of vendor/internal developer PRs.

Stack: PHP 8, Laravel, Symfony 5.4 LTS, Doctrine, API Platform, Docker, GitHub, Nuxt.js, Composer, npm/npv, Postman, dependency management, CI/CD, AWS, CloudWatch, Sentry

Norsys - Back-end Developer

2016 - 2018

IT services company, enterprise projects - [norsys.fr](#) · Lyon area · On-site / client site depending on assignment

- De facto technical referent for 3 developers on a Symfony HR CRM for Franprix.
- Symfony architecture support, Design Patterns, technical choices, module breakdown, Symfony/Doctrine query optimization, bug resolution, code review and developer support.
- Decathlon assignment: Symfony + Twig development of a full OOP LDAP registry and dynamic forms.
- Fiducial client-site assignment: Symfony + Twig development of an internal patrol tracking tool for security agents.

Key Skills

Backend:

PHP 8 · Laravel · Symfony · Doctrine/Eloquent · server-side logic · API development · REST/OpenAPI APIs · API Platform · Secure Authentication · Auth0 · Laravel Sanctum · SSO/single sign-on · API versioning/backward compatibility · MySQL/MariaDB · Redis · RabbitMQ · WebSockets/real-time · CLI · `async/queues/workers`

Quality & architecture:

PHPUnit · Behat · test strategy · integration testing · automated E2E tests · security testing · OWASP/vulnerability analysis · Clean Architecture · Design Patterns · GRASP · schema design/UML reading · query optimization · technical indicators · HTTP status codes · 4xx/5xx errors · problem solving · maintainability · technical debt/refactoring · PHPStan/Larastan · PHPStan/Code Sniffer · Playwright · OOP · SOLID · TDD · PSR · technical arbitration/trade-offs · collective review · technical documentation · sequence diagrams

Collaboration:

development team by scope/feature · Agile/Scrum methodology · clear roles · lead developer framing · well-defined tickets · autonomous implementation · fast questions · short video calls when useful · design reviews · Git workflow mentoring · participation in technical discussions

Delivery:

Docker · Docker Compose · Make · GitLab CI/CD · GitHub/Docker · Jenkins · Kubernetes/GitHub · incremental deployments · post-deployment monitoring · alerting/observability · multi-region environment · monitoring/rollback · Ansible · dependency management with Composer/npm/npv · Nginx · AWS CloudWatch · Sentry/GlitchTip · ELK (Elasticsearch, Logstash, Kibana)

Frontend exposure:

Vue.js/Vue 3 · TypeScript · Nuxt.js · React · Vite · Pinia · Twig

Technical exploration and monitoring:

DDD/CQRS/Event-Driven Design, strong interest and personal projects · scalability solutions · software development life cycle · Octane/Swoole · Reverb/WebSockets · Neo4j · local k3s · Grafana/Loki/Alloy · Codex · Codex Skills · MCP · Paperclip · LangChain/LangGraph · controlled AI workflows · daily LinkedIn/comment monitoring, AI, IT economics, PHP and the Laravel ecosystem

Languages:

French native · English fluent for professional and technical work, spoken and written · C1 level estimated in advanced coaching, no official certification · Evina English exchanges and YouTube interview in English

Other Experience & Education

- Groupe Blachere (2020-2021, hybrid):** Symfony interface/API/Docker microservice for storage constraints, OOP/DDD placement algorithm, PHPStan and 2D visualization.
- SensioLabs (2018, 6 months, full remote):** Symfony/Twig event website, Alumni endpoints, Microsoft Graph/Yammer/Bing APIs through Guzzle, RabbitMQ/Swarrot, Redis/JWT, tests and Docker/Travis CI.
- ActivCompany / YouMiami (2015):** Symfony2 apprenticeships on a professional sector social network and a culinary social network; Facebook Login, Elasticsearch, front-

Recent Non-Salaried Experience - Personal Technical Product

Sonomundi - Laravel/Vue event/music product

Laravel/Vue product · development started in December 2025 · entrepreneurial initiative · controlled AI lab

Technical evidence: Demo access: <https://demo.electronic.sonomundi.com/> · volume, tests, screenshots and anonymized architecture available for discussion.

- Event/music Laravel/Vue product built solo, with a Hostinger-hosted pre-production environment currently tested and continuously improved, and a dedicated demo pinned to a specific version; used as non-salaried product experience: product framing, entrepreneurial initiative, server-side logic, API development, multi-role auth, admin surfaces and API contracts.
- Goal: turn back-end/product/AI engineering expertise into a demonstrable technical asset, with scope, quality, recruiter evidence, realistic evolution, a path to a published and living side project, and automated improvement.
- Volume verified on 2026-07-08 with cloc 2.09 on docs/preprod-v046-verification-20260708: 274,225 product-core lines across 1,589 files and 130,623 product-test lines across 813 files, excluding dependencies and heavy artifacts; 2,995 commits; GitHub Languages: PHP 46.8%, Vue 19.7%, TypeScript 17.6%, Python 7.4%, Shell 3.3%, Makefile 1.8%, Other 3.4%.
- Demonstrable base: API contracts, OpenAPI/Scramble documentation (483 paths / 546 operations), back-end/UI tests, CI/CD, Docker/Make validation, Python/FastAPI services (sphere-api, google-rss-link-decoder-api, flyer-remix-service), architecture screenshots and human review.
- Software development life cycle experimented end to end: specs -> Codex/autopilot lanes -> worktrees/branches -> Docker/Make validation -> LLM reporters -> human review, with CI/CD, Codex Skills, MCP, Paperclip and LangChain/LangGraph.
- Guardrails: no auto-merge, no exposed secrets, LLM not treated as source of truth and final integration manually arbitrated.
- Hostinger-hosted pre-production is currently tested and continuously improved; the dedicated demo is pinned to a specific version and run by me during interviews: Demo access: <https://demo.electronic.sonomundi.com/>. The recruiter has nothing to install or execute for the demo.
- Technical discussion material available: anonymized architecture, OpenAPI/Scramble, CI/CD, PHP/TypeScript/Python services, last documented full PHPUnit run 1965 passed / 14144 assertions and human review of AI deliverables.

end work and Doctrine/MariaDB migration.

- **E-testing / Indexx (freelance):** PHP technical questionnaires for training, with Docker verification across PHP versions; short OAuth, Twilio and NestJS assignment.
- **Education:** DEUST Webmaster, University of Limoges (2012) · Jazz piano, Annecy Conservatory (2008) · Technical baccalaureate STT, IT specialization (2005).
